

**IN THE ABSTRACT:**

Applicant has provided herewith a replacement abstract on a separate sheet.

The original abstract has been amended as follows:

~~The invention relates to the field of playthings, A construction sets, etc., set~~  
assembled using connective non-adhesive elements. ~~The essence of the invention:~~  
~~a meccano containing~~ construction set includes connective elements and various  
polygonal formative parts with coupling elements configured as rectilinear sides  
with a length in the nominal of modular and/or modular-derivative size with the  
coupling elements configured as rectilinear sides with a length in the nominal of  
modular and/or modular-derivative size, the connective elements being configured  
as a group of links having different fixed ~~angle~~ angles of mutual disposition of the  
formative parts to be connected. The technical result that can be accomplished ~~in~~  
~~implementing the invention~~ consists in creating a game environment requiring  
foreseeing a non-obvious result of subsequent several couplings and conscious  
selection for this purpose of appropriate formative parts and connective elements.
